Northwood, IA 50459

Customer ID: 2857  
Certificate: 42-B-0227  
Site: 001  
BRIAN AND BECKY HABERMAN

Type: ROUTINE INSPECTION  
Date: 09-JUN-2015

### 3.1(b)

#### HOUSING FACILITIES, GENERAL.

(b) Condition and site.

\*\*\*Within the housing facility for ten puppies, there were several items sitting on the floor and immediately surrounding the two occupied animal enclosures. These items included gasoline containers, bags of aluminum cans and other garbage-like items, buckets, ladders, and many other miscellaneous items which were not all for the care and husbandry of the animals. The area also contained an opened bag of puppy food and bedding. The licensee must keep all animal housing areas neat and free of clutter to allow for ease of cleaning and to decrease the risk of attracting pests and other disease hazards. Animal areas inside of housing facilities must be kept neat and free of clutter, including equipment, furniture, and stored material, but may contain materials actually used and necessary for cleaning the area, and fixtures or equipment necessary for proper husbandry practices. To be corrected by: June 19, 2015.

### 3.1(c)(2) REPEAT

#### HOUSING FACILITIES, GENERAL.

(c) Surfaces. (2) Maintenance and replacement of surfaces.

\*\*\*Within an enclosure housing puppies, there was a hard plastic panel which was chewed and damaged along the edge of the panel as well as on the flat surface of the panel. The rough edges are easily accessible to the puppies and there is some buildup of dirt and grime in these chewed/damaged areas of the plastic. These roughened edges do not allow for proper sanitization of the surface and they also increase the risk of injury to the dogs with the sharp edges. The licensee must ensure that all surfaces of housing facilities that cannot be readily cleaned and sanitized are repaired or replaced when worn or soiled.

### 3.1(e)

#### HOUSING FACILITIES, GENERAL.

(e) Storage

\*\*\*Within a facility housing puppies, there was an open bag of bedding and an open bag of puppy food also with a hole on the side of the bag. The open bags of bedding and food increase the risk for pests and contamination. The

## Inspection Report

---

licensee must ensure that all opened supplies of food and bedding are kept in leakproof containers with tightly fitting lids to prevent contamination and spoilage. To be corrected by: June 13, 2015.

### 3.125(a)

#### FACILITIES, GENERAL.

##### (a) Structural strength.

\*\*\*There were several areas with sharp points within the camels' enclosure. There was a non-attached wooden framed fence lying against the primary enclosure fence with at least two sharp nail ends protruding into the enclosure at the level of the animals. Also, there were several pieces of fence wire protruding into the enclosures forming sharp points which could come in contact with the animals. One of the wire ends was observed with camel hair attached to it. Sharp points increase the risk that the animals could become injured. The licensee must ensure that housing facilities are structurally sound and maintained in good repair to protect the animals from injury at all times. To be corrected by: June 13, 2015.

### 3.127(d)

#### FACILITIES, OUTDOOR.

##### (d) Perimeter fence.

\*\*\*The camels and kangaroos were housed in the outdoor facility which did not have a complete perimeter fence surrounding their primary enclosures. The licensee has a perimeter fence around a portion of the facility; however, the fence is incomplete for several yards in multiple sections for the kangaroos' and camels' current enclosures. The lack of a complete perimeter fence does not prevent unauthorized people or unwanted animals from having access to the animals housed within the facility. Also lack of a complete perimeter fence cannot function as a secondary containment system. The licensee must ensure that all outdoor housing facilities for the kangaroos and camels are enclosed by a perimeter fence that is at least 6 feet high in order to protect the type of animals in the facility at all times. To be corrected by: September 1, 2015.

The inspection was conducted on June 9, 2015 with the licensee and a representative from IDALS. The exit interview was conducted on June 10, 2015 with the licensee.

Note: this is an electronic version of the inspection report dated June 09, 2015. The licensee received an original copy on June 12, 2015.
