Site: 001

SIERRA NEVADA ZOOLOGICAL  
SOCIETY

Type: ROUTINE INSPECTION

Date: 30-OCT-2023

### 3.75(c)(1)

#### Repeat

#### Housing facilities, general.

The enclosure for the vervet had an approximately 4 inch diameter metal mesh drain cover on the outer wall that was broken with sharp irregular edges. It was located inside the cage and accessible by the vervet. The broken, irregular, sharp points and edges could potentially injure the vervet, and primary enclosures must be maintained in good repair and protect animals from injury.

Correct by: 11/10/2023

### 3.133

#### Critical

#### Separation.

On 14 September 2023, a female fallow deer died from wounds received during an aggressive encounter with the intact male in the enclosure. The facility has housed male and female sika and fallow deer together for the last 5 years with no observed conflict or incompatible behavior. After the female was found, the male was immediately moved to a separate enclosure. Animals housed in the same primary enclosure must be compatible and cannot interfere with the health of other animals or cause them discomfort.

Corrected at the time of inspection: 10/30/2023.

### 3.150(e)

#### Facilities, general.

There were approximately 4 bottles of cleaning solution stored in a large bucket, adjacent, and beneath bird food preparation sink. Spillage of toxic substances in food preparation areas represents a potential risk to the health and welfare of the animals. Substances, such as cleaning supplies, that are harmful to the birds, but required for normal husbandry practices, must not be in food storage and preparation areas. These substances may be stored in cabinets in the animal areas, provided they are stored in properly labeled containers that are adequately secured to prevent potential harm to the birds.

## Inspection Report

---

Correct by: 11/13/2023

### 3.153(a)(1)

#### Primary enclosures.

There was a large trash dumpster with the top open, several discarded cages, farm equipment, and other discarded items on the grounds by entrance to the back barn. The peacocks at the facility are free-roaming and have access to all areas. There were at least three adults peacocks and many babies observed walking around the areas of clutter at the time of inspection. Discarded matter can cause injury to the free-ranging animals as well as serve as living areas for rodents and other pests. The facility must ensure the premises where housing facilities are located, including surrounding grounds, are kept clean to facilitate proper animal husbandry and sanitation.

Correct by: 12/3/2023

### 3.154

#### Environment enhancement to promote psychological well-being.

The facility did not have a documented environment enhancement plan to promote psychological well-being of their avian species as required by the Animal Welfare Act. The facility must develop, document and follow a species appropriate plan for environmental enhancement adequate to promote the psychological well-being of birds. The plan must be approved by the attending veterinarian, and at a minimum must address social grouping, environmental enrichment, special considerations, restraint, and exemptions to the plan regulation and be in accordance with currently accepted professional standards.

Correct by: 11/17/2023

This inspection and exit interview were conducted with the managers.
