2.40(b)(5)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A Zebu "Bandhu" was sedated by the attending veterinarian at 9:00 AM on July 12, 2013, and was subsequently found dead the following day. The probable cause of death was listed as aspiration &/or regurgitant choke. There are no medical records or personal (employee) accounts to document the after-procedure care, other than a written statement indicating that the animal was ambulatory prior to the veterinarian leaving the facility and the animal was "woozy" @ 3 P.M.. The sedation was performed & this animal was subsequently confined to a barn area.

The facility does not have an SOP for aftercare following anesthesia or sedation of any animal, and cannot demonstrate that this animal received adequate post-procedural care in accordance with established veterinary medical care and nursing procedures. This may be accomplished by (but not limited to) establishing SOP(s) for pre & post procedural care, and documenting that care so that compliance (or non-compliance) with the Animal Welfare Act Regulations & standards can be ascertained.

Correct immediately

2.75

RECORDS: DEALERS AND EXHIBITORS.

The licensee did not record the drivers license # & vehicle tag number for the acquisition of a Zebu "Priya", and did not record the address of a disposition of a goat Emmett.

All acquisitions records must contain the drivers license number & vehicle tag number from all persons who are not USDA licensed. All dispositions records shall contain the address of the person acquiring the animal.

Correct at next acquisition and/or disposition.

Inspection Report

FACILITIES, GENERAL.

The squirrels are being housed in an structure that is in disrepair. The ceiling of this structure has multiple holes and exposed protruding insulation material. There appears to be evidence of rodents in this ceiling also which poses a risk of injury &/or disease to these animals.

The gutter downspout along the right portion of one of the goat's shelters has broken off. The rain water that falls off of the roof now pours directly into a portion of the shelter. A portion of the wood directly underneath this broken downspout is now rotted due to the water damage. When it rains, the ground will get wet from the water run-off and the animals that might use this shelter would not stay dry.

All housing facilities shall be maintained in good repair to protect the animals. The holes in the ceiling shall be repaired, and the insulation material shall be contained so that it cannot fall into the animal's enclosure or pose a risk of ingestion. This area shall also receive appropriate rodent control if these animals are to remain in this area.

The gutter downspout shall be repaired so that the rainwater does not fall into the shelter &/or enclosure, and is directed away to outside of the enclosure to protect the animals.

Correct by July 1, 2014

The exit interview was conducted with the Supervisor of the Animal Care Dept.
