Type: ROUTINE INSPECTION

Date: 13-MAR-2024

3.137(a)(1)

Primary enclosures used to transport live animals.

On October 2, 2023, a female juvenile mountain lion was transported from the hospital quarantine area to her new primary enclosure. During transit, she was able to escape the transport enclosure. The animal was recovered safely without injury within several minutes. Primary enclosures used in transport that are not sufficient in structural strength may lead to animals escaping or being injured. The licensee must ensure that primary enclosures used to transport live animals shall be constructed in such a manner that the structural strength of the enclosure is sufficient to contain the live animal. Corrective actions have been implemented at the time of the inspection.

This inspection and exit interview were conducted with facility representatives.
