

## Inspection Report

Godwins Gatorland Inc  
14501 S Orange Blossom Tr  
Orlando, FL 32837

Customer ID: 3251  
Certificate: 58-C-0014  
Site: 001  
GODWIN'S GATORLAND, INC.

Type: ROUTINE INSPECTION  
Date: 05-MAY-2016

### 2.40(b)(3)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A goat "Travis" appears thin. His dorsal thoracic area is tented with little muscle mass on either side of the thoracic spinal column. The records indicated that this animal was last weighed in March 2015, when the veterinarian's physical examination determined that this animal appeared normal & was healthy.

There are no keeper records for the last 13 months to review concerning this animal's condition. The licensee does not have a scale, so no weight could be obtained on this inspection to compare it with last years' to see if this animal has lost any weight

Have your veterinarian examine this goat and treat accordingly

Correct by May 12, 2016

### 2.125

#### INFORMATION AS TO BUSINESS; FURNISHING OF SAME BY DEALERS, EXHIBITORS, OPERATORS OF AUCTION SALES, INTERMEDIATE HANDLERS, AND CARRIERS.

A goat "General" was euthanized in 2015. There are no records to indicate the reason for euthanization or the events leading up to euthanization. The records did not indicate any recent medical issues that would warrant euthanization.

Another goat "Nessie" was also euthanized in 2015 for a traumatic injury. There are no records to indicate when this injury first occurred and when this animal was euthanized.

Without this type of information, it is not possible to determined if these animals received adequate veterinary care (and pain relieving medications) before they were euthanized.

The facility's computer systems crashed back in 2015 and any information was lost. With the present method of data collection it is difficult to retrieve specific daily keeper observations to determine if animals are receiving proper

## Inspection Report

---

daily observations and veterinary care for sick or injured animals.

A system shall be developed and implemented which would determine & demonstrate compliance &/or enforcement with the applicable regulations and standards of the Animal Welfare Act.

Correct immediately

### 2.131(b)(1) REPEAT

#### HANDLING OF ANIMALS.

The licensee is still utilizing 6 foot sticks with a flat edge to allow the public to feed meat to the panthers. These implements do not minimize the risk of injury to these cats as they are being fed.

The use of feeding tongs (or other types of instruments) should be used which would not pose a risk of injury to the cat's eyes, teeth, or other body parts during these feeding encounters by the public.

### 2.131(c)(1)

#### HANDLING OF ANIMALS.

The barrier fences located at the raccoon exhibit (along the train track side) and the opossum exhibit (at the left side) are incomplete leaving an area which would allow the public easy access up to the exhibits.

There shall be sufficient distance and or barriers between the public and the animals so as to assure the safety of the animals and the public.

Correct by June 1, 2016

### 3.125(a)

#### FACILITIES, GENERAL.

Two door hinges in the goat/zebu exhibit are not secured by screws on one side which affix the hinge to the door. This now allows the hinges to freely swing. These hinges are located above the water receptacle which now pose a risk of injury to these animals as they drink.

These hinges shall be securely fastened to prevent potential injury.

Correct by May 7, 2016

## Inspection Report

---

### 3.125(c)

#### FACILITIES, GENERAL.

The feed shed has accumulations of dirt, dead insects, and evidence of rodents. There were scattered peanut shells and pieces of building insulation on top of a few feed bags and on the floor. The seal around the entrance door is cracked/missing at the bottom. This area, as well as another area (between the floor and the wall), are no longer sealed and have gaps. These spaces can facilitate areas where small rodents can enter the building.

This area presently has some rodent repellent bags, but this seems to be ineffective in controlling the rodent population.

The feed shed shall be cleaned more frequently. The door seal shall be repaired or replaced and the gaps reinsulated (or otherwise closed off) to minimize the entrance of rodents and protect the food from rodent contamination.

Correct by June 1, 2016

The exit interview was conducted with the Supervisor of the Animal Care dept.
