Education Center, Inc.

Type: ROUTINE INSPECTION

Date: 28-JAN-2025

3.127(d)

Facilities, outdoor.

There was no perimeter fence around the outdoor primary enclosures of the two opossums and the one raccoon. Perimeter fencing protects the animals at the facility from injury and disease. Further, perimeter fences can keep unwanted animals and unauthorized people from having unsupervised contact with the animals at the facility and can also serve as a secondary containment system for the animals.

Outdoor housing facilities for the species held by the licensee must be enclosed by a perimeter fence that is of sufficient height (6 feet) to keep animals and unauthorized persons out. The fence must be constructed so that it prevents animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Correct by providing such a perimeter fence. If an alternative method of security is to be employed, it must be applied for and approved in writing by the Administrator.

Correction Date: July 15th, 2025

This inspection and exit interview were conducted with a facility representative..
