### 3.150(a) Critical

#### Facilities, general.

The double yellow-headed Amazon was killed since the last inspection on January 25, 2024. The facility representative stated that the Amazon was predated upon by a racoon through the enclosure wall or ceiling. The primary outdoor round enclosure was roofed on top, and the sides were made of a rigid wire mesh with spacing between the wires of approximately 1" x 1" squares that allowed a predator access to the amazon. Failure to provide a safe primary enclosure can result in injury and/or death of the birds contained within. Housing facilities for birds must be designed and constructed for the species of bird housed in them, must be kept in good repair, protect the birds from injury, and restrict other animals from entering that may negatively affect the welfare of the birds.

Correct by May 01, 2024

This inspection and exit interview were conducted with facility representatives.
