Type: ROUTINE INSPECTION
Date: 14-JUN-2016

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** A beagle had long nails that were beginning to splay outward. Long nails pose a potential hazard if they get caught in the wire mesh or grow under into the foot pad. Dogs need their nails trimmed on a routine basis to prevent injuries.

*** A 4 year old female Yorkie # 0A02052077 has an accumulation of tartar on the teeth and the gums appeared red and irritated. According to the PVC all dogs at the facility should have their teeth assessed annually and a plan in place to prevent and treat dental disease. This dog is recently acquired and needs to be seen by the vet to have a dental assessment and determine best treatment options for dental issues.

Correct by: June 30, 2016

3.1(a)

HOUSING FACILITIES, GENERAL.

*** The walls of the enclosures are constructed of garage door panels. The plastic that the doors panels were wrapped in is now peeling away from the panels. The plastic needs to be removed from the panels to reduce the potential ingestion hazard to the dogs. This needs to be corrected to protect the animals from injury and to keep the enclosures in good repair.

Correct by: June 19, 2016

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

*** The carpets in the whelping boxes are wet with water and urine and the area underneath the carpets was dirty and has not been spot cleaned along with the rest of the box. These carpets need to be replaced and the whole box spot cleaned on a daily basis for the health of the animals.

Inspection Report

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** There is a layer of grime and debris underneath the lip of the feeders. The feeders need to be cleaned and sanitized at least once every two weeks to prevent this accumulation of debris.

*** The rain breaks on the doors to the whelping boxes need to be cleaned. There is a layer of grime and debris on the breaks that are not being cleaned and removed on a routine basis. The walls of the outside section of the whelping boxes also have a layer of grime and debris. These areas of the whelping boxes need to be cleaned and sanitized on a routine basis of every two weeks to prevent this accumulation and for the health of the dogs.

*** There is an accumulation of feces underneath the outdoor section of the enclosures that needs to be cleaned. Additionally there is a build up of hair and debris that is not being removed on the frame of the primary enclosures in the outdoor section of the runs. This accumulation should be removed when the enclosures are sanitized every 2 weeks or more frequently if needed to reduce this build up and for the health of the animals.

Correct by: June 20, 2016

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** The area around the kennel and outside runs has a significant amount of weed and grass growth that needs to be trimmed back and controlled. There was also accumulations of discarded matter in the bushes and next to the kennel. This overgrown environment creates an area for pests to live and breed. This area needs to be addressed to keep the area clean and in good repair.

*** There is a section of wire mesh enclosures that is being stored underneath the whelping boxes. The enclosures have not been used for multiple weeks but there is still sawdust and excess food on the floor underneath the enclosures. This excess food is an attractant to pests and the area needs to be cleaned on a routine basis to reduce this hazard.

Correct by: June 21, 2016

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** There was swarms of flies around the kennel area, in and around the feces underneath the enclosures and among the weeds and grass growth around the kennel. An effective program for the control of insects must be established and maintained to reduce contamination by pests in animal areas to promote the health of the dogs.
