Type: ROUTINE INSPECTION
Date: 13-OCT-2016

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Female English bulldog "Sabrina" has discharge coming from both eyes. The discharge from the right eye has a yellowish color and is located mostly along the bottom eyelid and a strand of it was across the eye and attached to the upper eye lid. A small amount of the yellow discharge is located on the hair of the upper eye lid. The discharge from the left eye is clear and is located mostly along the bottom eye lid. The hair around the top, bottom and the outside edge of the left eye is wet. The whites of both eyes are slightly reddened. Physical examination of the dog revealed an area of thickened, crusty, dark colored scab-like material on the underside of her neck. Between the toes of the left front foot there is a round, slightly reddened growth. The top of the growth has broken open and a small amount of blood is coming from the area.

The licensee has documentation that this dog was evaluated by a licensed veterinarian on July 26, 2016 for the condition of the eyes. The vet had advised that the dog have eye surgery after her puppies were weaned. The licensee stated that the puppies had been weaned at least two weeks prior to the inspection, but there was no appointment for surgery set and the dog has received no treatment from a licensed veterinarian for the eyes after the initial evaluation in July. The licensee stated that she has self-treated the dog's eyes when she noticed the discharge. This dog has not been evaluated by a licensed veterinarian for the abnormal foot growth or the skin condition on the neck.

Female English bulldog "Muffin" was observed to be squinting her right eye and did not want to hold it open. Closer examination of the eye revealed that the skin around the eye was extremely red and swollen. The white of the eye is also very reddened. There is a small amount of yellowish discharge located on the lower eye lid of the left eye. This dog had received eye surgery in July and was evaluated again by a licensed veterinarian on September 19th for an unrelated concern. There was no mention of the dog's eye condition by the veterinarian during the September evaluation.

Poor eye and skin health and abnormal growths could cause pain and discomfort to the dog. The above mentioned dogs must be evaluated by a licensed veterinarian for a proper diagnosis and to establish an effective treatment plan. The diagnosis and treatment plan must be documented in writing and available to the inspector upon request. The licensee contacted a licensed veterinarian and transported the dogs to the clinic immediately following the
