Type: ROUTINE INSPECTION
Date: 15-JUL-2015

3.1(c)(1)(2)

HOUSING FACILITIES, GENERAL.

In the "Adult Room" there is one enclosure, housing two dogs, that has a sheet of metal on the wall near the access door. This sheet of metal has been torn into sharp points and edges. Sharp points and edges could injure the dogs. Licensee must replace, repair or alter this sheet of metal to eliminate all sharp points and edges. Licensee must ensure all enclosures are free of sharp points and edges and remain safe for the dogs. The dogs were moved to a different enclosure during the inspection.

Correction date: August 01, 2015

3.6(a)(2)(5)

PRIMARY ENCLOSURES.

In the "Adult Room" there is a section of enclosures against the wall that have access doors cut into the wall that allows the dogs to go into outdoor enclosures. There is an air conditioning unit installed in the wall above the access door of one of these enclosures and it is dripping water into the outdoor section. The entire flooring of the outdoor enclosure that is beneath the air conditioner was completely wet and the two dogs housed in this enclosure had wet hair on their legs and feet. The air conditioning unit was dripping water continuously into this enclosure while being observed by the inspector.

Wet hair coats could have a negative effect on the dogs' health and well-being. All primary enclosures must be constructed and maintained so that they enable the dogs to remain dry. Licensee must replace, repair or alter the air conditioning unit in a manner that keeps the outdoor enclosure beneath it dry. Licensee must ensure that all enclosures keep the dogs dry in order to promote their health and well-being. The dogs were moved to a different enclosure during the inspection.

Inspection Report

3.6(a)(2)(10)

PRIMARY ENCLOSURES.

In the "Adult Room" there is one enclosure, housing two dogs, that has flooring constructed of coated wire. Near the back of this enclosure the wire has been damaged and has left an approximately two inch wide hole in the floor. The feet and legs of the dogs could pass through this hole causing injury. All enclosures must have flooring constructed in a manner that protects the dogs' feet and legs from injury and does not allow the dogs' feet to pass through any openings in the floor. The licensee must replace, repair or alter this wire flooring in manner that would not allow the dogs' feet and legs to pass through. The licensee must ensure that the flooring in all enclosures is maintained and keeps the dogs safe from injury. The dogs were moved to a different enclosure during the inspection.

Correction date: August 01, 2015

Male poodle (microchip #4823482378) cited under 2.40 (b)(2) on inspection report dated September 03, 2015 was evaluated by a licensed veterinarian and received treatment.

Female poodle (microchip #4C1D1B0A4F) cited under 2.40 (b)(2) on inspection report dated September 03, 2015 was evaluated by a licensed veterinarian and is under a treatment plan.

Exit interview conducted with Kelly Maxwell, ACI and the facility representative.
