### 3.125(a)

#### Facilities, general.

There is a metal pole with wire wrapped around it located in a pasture that is used for seven male alpacas. This wire contains several large loops that present a risk of entanglement for the animals. The facility must ensure that indoor and outdoor housing facilities are maintained in good repair to protect the animals from injury and to contain the animals. Correct by September 4, 2024.

This inspection and exit interview were conducted with a facility representative.
