Sara McClaskey

Type: ROUTINE INSPECTION  
Date: 29-MAY-2025

---

### 3.131(d)

#### Sanitation.

The facility does not have an adequate program of pest control for flies. The primary enclosure housing 7 Egyptian fruit bats has too numerous to count flies swarming around the inside of the enclosure. There are flies of various sizes observed on the walls of the primary enclosure as well as swarming around and resting on the fresh fruit hanging in the enclosure that is provided to the bats as their primary source of food.

Flies and other pests can harbor and transmit diseases which might impact the health and well-being of the animals. The facility must establish and maintain an effective program for the control of insects, ectoparasites, and avian and mammalian pests. Correct by establishing a safe and effective program for the control of insects and by maintaining an effective program for the control of insects, ectoparasites, and avian and mammalian pests.  
Correct by 16 June 2025.

This inspection and exit interview were conducted with the facility representatives.
