PEEPS AND CREEPS

8535 W. Hwy 158  
MIDLAND, TX 79707

Customer ID: **323347**

Certificate: **74-C-1052**

Site: 001

Peeps and Creeps Inc.

Type: ROUTINE INSPECTION

Date: 31-MAY-2023

---

**2.75(b)**

**Repeat**

**Records: Dealers and exhibitors.**

Facility representatives did not have disposition records for some animals that left the facility since the last inspection.

One coati, three guinea pigs, two raccoons and two rabbits are no longer present at the facility, and there are no records of the details of their dispositions.

Records containing the required information for animals disposed of, or acquired for, use in regulated activities (including those offspring born on premises) are necessary to accurately track animals to ensure their humane care and use. The licensee must make and maintain records of the inventory, acquisition and disposition of all animals which fully and correctly disclose the required information.

**3.75(c)(3)**

**Repeat**

**Housing facilities, general.**

The enclosure housing two, adult female ring-tailed lemurs has accumulations of feces on the concrete floor inside all three of the tires used as enrichment.

Accumulations of feces can attract pests and vermin and encourage soiling of the animals. The licensee must ensure that surfaces with which non-human primates come in contact are spot-cleaned daily and sanitized in accordance with Section 3.84 of the Animal Welfare Act and Animal Welfare Regulations to prevent accumulation of excreta or disease hazards.

## Inspection Report

---

### 3.131(a)

#### Sanitation.

In the shelter structure inside the pen housing three adult coati, there is an accumulation of feces throughout the straw bedding.

Accumulations of feces are malodorous, encourage soiling of the animals and attract pests and vermin. The licensee shall remove excreta from primary enclosures as often as necessary to prevent contamination of the animals contained therein, to minimize disease hazards and reduce odors.

TO BE CORRECTED BY JUNE 7, 2023

### 3.131(c)

#### Repeat

#### Sanitation.

In the commissary area, there is a drain gully beneath the sink with an accumulation of food waste, and the refrigerator/freezer unit used to store food for many of the animals at the facility has dried, pink material in the freezer and food debris in numerous places.

In the enclosure housing two, adult male grey foxes, there are scraps of decomposing meat and a desiccated bird carcass that were not removed after feeding. Some of the scraps were covered in flies. The facility representative did not know how long the scraps and bird carcass had been inside the enclosure.

In the outdoor portion of the pen housing two, adult kinkajous, there are scraps of paper and duct tape on the ground. Accumulations of food waste and uneaten scraps encourage microbial growth, contamination of food and can be a source of disease-causing agents and odors when not removed after food prep and feedings. Trash or debris in enclosures can cause entrapment, injury or illness due to ingestion.

Premises where facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair in order to protect the animals from injury or illness, and to facilitate the husbandry practices required in the regulations.
