Type: RE-LICENSE INSPECTION

Date: 27-SEP-2024

2.131(d)(2)

Handling of animals.

While observing alpaca interactions with the public a readily identifiable employee could not be found. Two large outdoor pasture enclosures that are approximately $\frac{1}{2}$ acre in size and housing 20 alpacas of various ages in each enclosure allow for self-guided interactions and feeding. When identifiable employees were observed they were cleaning or performing other tasks and not monitoring the interactions with the animals. Additionally, in the goat barn, which houses 34 goats, there was a readily identifiable attendant in the indoor section of the barn, but this individual was unable to observe the interactions with the goats in the outdoor portion of the barn simultaneously.

A responsible, knowledgeable, and readily identifiable employee or attendant must be present at all times during periods of public contact. The facility must provide an adequate number of attendants to ensure any interactions with the animals are conducted in a safe manner for both the animals and the public.

Correct by 30 October 2024

3.127(d)

Facilities, outdoor.

The outdoor section of an enclosure that contains a pond water feature housing 2 capybaras does not have an adequate perimeter fence surrounding the enclosure. One side of the outdoor enclosure is surrounded by a wire livestock fence that measures 4 feet in height and a second side of the enclosure is surrounded by a metal bar fence that does not exceed 4 feet in height. The third side of the enclosure is surrounded by a deck with railing that does meet the 6 feet requirement in some areas but only measures 5.5 feet on one side of the deck.

The lack of an adequate perimeter fence can allow unwanted animals or people to enter the enclosure and potentially harm the animals within. The lack of a perimeter fence does not allow for a secondary containment for the animals and can lead to escape. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient height (at least six feet high) to keep animals and unauthorized persons out. It must be of sufficient distance (at least three feet) from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence.
