Type: ROUTINE INSPECTION
Date: 23-APR-2019

3.125(a)

FACILITIES, GENERAL.

The fence for the enclosure containing fallow deer, cavies and muntjacks has several areas of loose and sagging wire with some broken strands. This fence may fail to contain these animals or animals could be injured while attempting to exit the enclosure by testing areas of the fence that need to be repaired. This fence must be repaired/replaced in order to prevent possible injury to the animals it contains. Repair/ replace this fencing.

Correct by: 6/23/19.

3.127(d)

FACILITIES, OUTDOOR.

A 6 foot hire perimeter fence is not present for enclosures housing a groundhog, black-tailed prairie dogs, fennec foxes, foxes, red kangaroos and cavies. This perimeter fence is required to prevent unauthorized access to these enclosures by people or animals and to serve as a secondary containment for these animals. This helps to ensure the safety of the animals housed in these enclosures. Construct a 6 foot high perimeter fence at least 3 feet from the primary enclosures or apply for a perimeter fence variance.

Correct by: 7/23/19.

3.130

WATERING.

The water receptacles for the prairie dogs, fallow deer and lamas contain large amounts of algae floating in them and coating the inside of the receptacles. Water receptacles must be kept clean and sanitary. The amount of algae in these receptacles indicates that they have not been cleaned for some time. Water consumption may be reduced when water is not palatable and this can have a negative affect on animal health. Clean these water receptacles as needed to keep them clean and sanitary.

Correct by: 4/24/19.
