Site: 001
TERRILL AL-SAIHATI

Type: ROUTINE INSPECTION
Date: 28-JAN-2020

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is a 15 year old Barbados-cross black and white colored, female sheep which appeared to have a loss of vision indicated by the animal bumping into various objects during inspection. This sheep displayed abnormal behaviors including head twitching as well an occasional circling type of gait. Upon closer inspection, the sheep also showed an irregular type of eye movement. The facility representative stated he noticed the apparent blindness approximately three days ago and isolated the animal in a barn; however this animal has not received veterinary care at this time. The abnormal behaviors exhibited by this animal may be a sign of infection, injury, or other disease process. Additionally, these abnormal behaviors by the animal may cause the animal to experience pain, stress and or discomfort.

The facility must ensure that all animals showing potential signs of veterinary medical problems are evaluated by a veterinarian that can give an accurate diagnosis and an appropriate treatment plan for the problem cited above. The licensee must ensure that all animals at the facility are provided with adequate veterinary care. The program for providing adequate veterinary care shall include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

This animal was evaluated and treated by a veterinarian during this inspection.

3.125(a) REPEAT

FACILITIES, GENERAL.

An enclosure housing six goats had an approximate 20 ft section of chain link fencing that is in disrepair. The lower edges of the metal fence were bent inward with sharp points protruding into the enclosure. Additionally, this has created a gap large enough for the animal's limbs or head to become stuck and therefore poses the risk of injury to animals in this enclosure.

All enclosures must be kept in good repair and free of sharp points, protruding edges, holes, and gaps/openings in order to protect the animals from injury. A system of facility monitoring and maintenance should be in place and to ensure all animal facilities are structurally sound and in good repair to protect the animals from injury and to contain

Inspection Report

the animals.

3.127(d) REPEAT

FACILITIES, OUTDOOR.

An approximate 8 ft long section of perimeter fence in disrepair at the south end of the facility has a measured height of 5 ft 4 in. Fences less than 8 feet high for potentially dangerous animals, such as, but not limited to, large felines (e.g., lions, tigers, leopards, cougars, etc.), bears, wolves, rhinoceros, and elephants, or less than 6 feet high for other animals must be approved in writing by the Administrator. The perimeter fence also acts as a secondary containment system for the animals in the facility. Some of the regulated species of animals at this facility are required to have at least the 6 foot high perimeter fence surrounding their enclosures. This facility must ensure the required 6ft. minimum height is being maintained.

This inspection and exit interview were conducted with a facility representative.
