Long Island University

Type: FOCUSED INSPECTION

Date: 07-JUN-2023

2.38(f)(1)

Critical

Miscellaneous.

On 5/13/2023 an employee did not disengage the headlock system holding 17 cattle after their evening feed. The 17 heifers were confined in the headlocks from approximately 6:30 pm until 9:15 am, when the morning caretaker released the cattle. The heifers did not have access to water and were not able to comfortably rest during this unintended confinement. This incident was not reported to supervisor until Monday, 5/15/2023, afternoon. Prolonged restraint in headlocks can cause unnecessary discomfort and a lack of water can negatively affect animal health. Handling of all animals shall be done as carefully as possible in a manner that does not cause trauma, overheating, excessive cooling, behavioral stress, physical harm, or unnecessary discomfort. Correct by 6/14/2023.

This inspection and exit interview were conducted with a facility representative.
