Certificate: **33-C-0146**
Site: 001
FRIENDLY FARMS LTD

Type: ROUTINE INSPECTION
Date: 08-SEP-2015

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A male brown and white goat has excessively long hooves. Both of the animal's front and rear hooves were overgrown by approximately 2 inches. The goat was walking normally during the time of inspection, however; overgrown hooves can potentially make it painful for goats to walk.

Trim the hooves and repeat as often as necessary to provide of for the well-being of the animals.

To be corrected: 9-15-15

2.75(b)(1)

RECORDS: DEALERS AND EXHIBITORS.

The animal acquisition records are incomplete. The undersigned inspector was unable to accurately account for all of the goats and sheep at the facility. The records of animal births were not present in any of the records. Records containing all of the information in 2.75(b)(1) are required to account for all the animals entering and leaving the facility.

Assure animal births are completed in the records in a timely manner.

To be corrected: The goat and sheep records must be updated to include offspring by 9-15-15.

3.56(a)(1)

SANITATION.

Four of the six rabbit enclosures contain excessive amounts of feces. Additionally, one of the enclosures had excessive rabbit fur on the cage wall. The smaller brown and white rabbit's enclosure contained a pile of feces measuring approximately 3x3 inches in the corner. Feces can attract flies and serve as a reservoir for diseases that affect animals.

Thoroughly clean and sanitize the rabbit enclosures and repeat often enough to prevent excessive build up.

Inspection Report

To be corrected: 9-11-15

3.131(a)

SANITATION.

Approximately one foot of hay, straw, and feces are present on the ground of the goat pen. The goats are housed in a pen comprised of wire panel. The height of the hay, straw, and feces can be visualized from outside of the pen as the fence height has been shortened for the animals. Additionally, The top of the plastic water tub, approximately one foot in height, is nearly level with the hay, straw, and feces. The excessive material could potentially allow the animals to escape from their enclosure and/or contaminate their drinking water.

Remove the excess hay, straw, and feces from the pen and repeat often enough to prevent build up.

To be corrected: 9-22-15

The inspection exit briefing was conducted with the undersigned facility representative.
