Certificate: **65-A-0538**
Site: 001
THERESA FARLEY

Type: ROUTINE INSPECTION
Date: 29-FEB-2024

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Four adult coatis have tails that have significant patchy hair loss affecting one quarter to half of their tails. One white female adult coati has a very small sharp white point on the end of her tail that may be bone. While the licensee has a treatment from the Attending Veterinarian on hand, at the time of the inspection she had not started using this treatment for the animals in accordance with the AV's instructions.

Hair loss can be a sign of allergies, skin infection, or overgrooming. Areas of hair loss may be itchy or uncomfortable for the animal. Correct by 3/13/24 by communicating with the Attending Veterinarian regarding the current condition of these animals and following his instructions for their treatment and care.

This inspection and exit interview were conducted with the licensee.

Additional Inspectors:

COURTNEY JERNIGAN, VETERINARY MEDICAL OFFICER
