3.125(c)

FACILITIES, GENERAL.

The meat freezer appeared to be not functioning properly. When the door was opened there was a strong odor of decomposition. Upon examination of the meat stored there it was discovered that the chicken was no longer frozen although it had been placed inside approximately 30 days prior. There were also bottles of orange juice inside that were not frozen. Food must be unspoiled, wholesome, palatable and free from contamination. Meat that has not been properly stored may become contaminated with bacteria, lose nutritional value, or become unpalatable.

Supplies of food shall be stored in facilities which adequately protect them against deterioration. The freezer must be repaired or replaced to adequately store frozen meat supplies.

Correct by April 3, 2015.

3.127(c)

FACILITIES, OUTDOOR.

Enclosures for several of the tigers, lions, cougars and bears had standing water and puddles that were not rapidly draining. The area in front of the liger and tiger lockout entrance to the yard had a large puddle of water in which the liger was wading. The animals will have to cross through it to enter the exercise yard. The shelter for the lions in the front of the facility had a hole dug out beneath it which encompassed nearly the entire shelter floor and was filled with water. Therefore the lions would have been unable to remain dry when seeking shelter from the rain. In addition the chicken and meat for these lions was placed on a small cement platform surrounded by water and the lions would have to stand in the water to access this meat. The food for the bears was served in bowls and later dumped by the bears into the standing water. Many of the animals were wet and although it was unclear if it was because they chose to be out in the rain or because they do not have adequate dry areas within the shelter. A suitable method shall be provided to rapidly eliminate excess water in addition to providing high and dry areas for them to remain dry.

To be corrected by April 15, 2015 .

3.129(b)

FEEDING.

Inspection Report

In the bear enclosures the food and meat was dumped onto and spread across the muddy ground and into large puddles of dirty water. The meat in the cougar enclosure was observed mixed with mud and dirty water in the feed receptacle. Several of the tigers and lions meat was on the muddy wet ground thus contaminating it with dirt and possibly waste material. Eating contaminated meat and food may cause the animals to become ill. Food and food receptacles must be placed to minimize contamination.

Correct April 3, 2015.

This inspection and exit interview conducted with licensee, a USDA Animal Care Inspector and Veterinary Medical Officer.
