Type: ROUTINE INSPECTION
Date: 31-OCT-2024

3.84(c)

Cleaning, sanitization, housekeeping, and pest control.

The room housing the indoor portion of the lemur enclosures (ringtail and red ruff) is in need of cleaning. There is a thick layer of dust and dirt on the floor (can barely see the material of the flooring), the wall and objects in the room. The window is dirty and dusty. Cobwebs have accumulated above the ringtail lemur enclosures. Dirt, dust and cobweb accumulations can lead to pests, odors and enhance spread of disease. Premises where housing facilities are located must be kept clean. Correct by 11/10/24.

3.125(a)

Facilities, general.

The fencing of the wallaby yard (between the wallaby and kangaroo yards) is in need of repair. The bottom support pipe for the metal fencing has rusted significantly and in several places has rusted through. Sharp rusted points are noted along the support pipe. In one place it has rusted through completely. The sharp points may cause injury to the animals housed on both sides of the fence and the structural damage may lead to instability of the fence. The outdoor housing fences must be maintained in good repair. Correct by 11/21/24.

This inspection and exit interview were conducted with the licensee.
