Type: ROUTINE INSPECTION
Date: 20-SEP-2017

3.125(a)

FACILITIES, GENERAL.

Some areas in enclosures had sharp/rough edges and loose wire that are in need of repair:

- The southeast corner of the fallow deer shed has a hole in it with rough sheet metal exposed to the deer.
- The shed entry for the brown swiss calf has a broken wire panel exposing sharp points and the ends of the cut panels for that entry expose sharp points to the calf.
- The pen for the nanny goats has loose wire fence along the back west side of the pen.

Animals could get injured on sharp/rough edges and loose wire. Ensure that enclosures and fixtures such as shelters inside of enclosures are maintained structurally sound and free of sharp points for the safety of the animals.

Correct by October 9, 2017.

3.125(c)

FACILITIES, GENERAL.

One of the unopened feed bags stored for the white-tailed deer in the barn had an inch-sized hole in it with rough edges around it and around that hole was spilled feed with rodent droppings. The feed storage shed also had some spilled feed in the northwest corner with rodent droppings in the same area. These are signs that some kind of vermin is getting into the whitetails' feed and the feed shed. Rodents can contaminate feed and cause animals to get sick that eat rodent-contaminated feed. The facility must maintain animal feed storage areas clean, implement safe and effective pest control measures, and ensure storage methods protect animal feed supplies from rodent access.

Correct by 9/23/17.

Inspection Report

FACILITIES, OUTDOOR.

Shelter from inclement weather.

A llama is housed with a bison and it was observed that the bison took up most of the shed for shade and the llama's minimal shade was provided by tires hanging on two elevated posts. The facility representative reported that the bison and llama don't bother each other but they also don't really get close to each other and don't share the roofed shelter in the enclosure. In inclement weather, the llama's area of minimal shade under the elevated tires would not provide much shelter from inclement weather. Lack of access to shelter can cause animals unnecessary discomfort. An additional shelter that the llama is free to use must be provided so that both animals in the enclosure have free access to protection from inclement weather.

Correct by 9/27/17.

3.130

WATERING.

The prairie dogs' water bowl was soiled and had soiled water in it. It had a dark build-up of material and loose leaves in it. Also, the sow with piglets had little water left in a soiled watering pan and was reported to have been watered in the morning but that she plays in the watering pan and splashes it out. It is good that she can play in water as this is a species-typical activity, but either additional clean water should be provided more frequently or better yet secure a watering receptacle in a manner that she can't play in it addition to the one that she plays in so that adequate clean drinking water is available throughout the day. Soiled water can cause animals to get sick. Ensure that all animals are provided with adequate clean drinking water to maintain them healthy.

Correct by 9/21/17.

This inspection and exit interview were conducted with facility representatives.
