

## Inspection Report

D E W Haven  
918 Pond Road  
Mount Vernon, ME 04352

Customer ID: **322927**  
Certificate: **11-C-0017**  
Site: 001  
D E W HEAVEN

Type: ROUTINE INSPECTION  
Date: 30-AUG-2019

### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

The padlocked gate to a lion enclosure was chained to a solid post with a gap of approximately 6- 8 inches in width, extending the entire height of the fence, but behind the required set back fence preventing public contact with the side of the enclosure. The gap represents an area through which an adult lion potentially could extend a forelimb and reach a person walking next to the enclosure. Enclosures must be maintained to protect the animals from injury and contain the animals.

Correct by: August 30

A goat kid was observed to put its head through a gap in the enclosure gate fence, and was unable to withdraw the head due to the angle of its growing horns. The facility representative removed the animal from the gate, and placed a temporary barrier of a rock to avoid repeated occurrence. Should the animal become stuck overnight, it would not be able to access food, water, or shelter, and could be subject to bullying from other animals, resulting in pain or distress. Enclosures must be maintained to protect the animals from injury and contain them.

Correct by: August 30

The fence between two tiger enclosures had a thin dead tree leaning against the top, and a section approximately 3 feet in width by 2 feet in depth was slightly compressed. Tigers not co-housed and of unknown compatibility may exhibit athletic territorial or dominance behaviors that can weaken the structural integrity of fencing separating them, and unplanned comingling could result in injury to animals. The second tiger enclosure had small branches growing through the enclosure wall near a section of fence at the top of a wall next to the pond that was attached to two consecutive vertical fence posts by one wire encircling each one, with a loose top rail. Branches growing through fences may eventually weaken the strength of the fence. Similarly, the strength and agility of adult tigers may be sufficient to overcome the strength of this section of fence, resulting in lack of containment. Enclosures must be maintained to protect animals from injury and contain them.

Correction date: September 14.

## Inspection Report

---

3.125(c)

### FACILITIES, GENERAL.

Dead flies and mouse feces were present in the food preparation area around the sink and on shelves holding closed containers of food. Bird droppings covered the outside of the door of the bulk grain storage, and a hole was present that could permit access of birds into the grain bin. Vermin may contaminate feed or food receptacles with bacteria and viruses; leading to adverse health affects for animals. Supplies of food shall be stored in facilities which adequately protect such supplies against contamination by vermin.

Correct by: September 7

This inspection and exit interview were conducted with the facility representative.
