CENTER

Type: ROUTINE INSPECTION
Date: 15-AUG-2022

3.125(c)

Facilities, general.

The rodent pellets stored in the lab for a short-term mouse holding protocol had an expiration date of 2019 and had signs of deterioration. These pellets were fed to a study using wild-caught mice for 2 days in July 2022, although the lab reports that the mice also had free access to 6 different varieties of fresh produce to choose from throughout the study.

Deteriorated outdated rodent pellets are not a wholesome food and could possibly make animals sick. To ensure food is safe for animals, maintain food storage in a manner that protects food against deterioration, molding or contamination by vermin.

Note: The lab reports affected food is no longer needed in 2022 and will be disposed of and replaced prior to future studies.

Correct by 8/20/2022.

This inspection and exit interview were conducted with a facility representative.
