13850 Hwy 46 West
Spring Branch, TX 78070

Customer ID: **3918**

Certificate: **74-B-0571**

Site: 001

N B J Zoological Park Ltd

Type: ROUTINE INSPECTION

Date: 18-OCT-2016

3.82(d)

FEEDING.

The feeders for several of the non human primates (squirrel monkey , de brazzos monkey) are noted to have black debris on the sides . Mold and old food that is allowed to accumulate on a food container may contaminate the food and may cause an illness. Food containers must be kept clean and sanitized every 2 weeks.

CORRECT BY : 10-20-16

3.83 REPEAT

WATERING.

The water for the non human primates is somewhat cleaner than on the inspection in June but it still is not clean. Green algae and a black substance are covering the sides of the water containers for all the non human primates at this facility. Floating food is noted on the surface of the water for one pair of gibbons in the front enclosures. Potable water must be provided to every non human primate housed at the facility to ensure their health and well being . Water receptacles must be kept clean and sanitized with a method described in section 3.84 (b) (3) (ie. washing with appropriate detergent solution or hot water /detergent) at least once every 2 weeks or as often as necessary to keep them clean and free from contamination.

3.131(a)

SANITATION.

There is a smell of stale urine at the fennec fox enclosure this date. The substrate appears worn and dirty. There are several piles of feces and possible urine or body oil staining a large flat rock in the enclosure . This indicates the enclosure is not being cleaned as often as necessary . Fecal and urine buildup pose a disease risk and are a source of odors. Enclosures must be cleaned as often as necessary to prevent contamination and minimize diseases and odors.

CORRECT BY : 10-20-16

The inspection and exit briefing was conducted with the interim farm manager.
