Certificate: **23-C-0168**

Site: 001

ROBAS TREE FARM INC

Type: ROUTINE INSPECTION

Date: 20-APR-2017

3.125(a)

FACILITIES, GENERAL.

Section 3.125(a) Structural strength: The enclosure housing 2 llamas and 47 goats behind the house has an interior woven wire fence that has detached from the bottom of the third wood fence post. This has created a gap under the wire fencing where the fencing has pulled up away from the ground. Goats were observed going under the wire fencing at the time of the inspection instead of going through the fence opening. There are broken wires in the lower portion of the fence by the third wood fence post that may injure the goats. Animal enclosures must be structurally sound and maintained in good repair to protect the animals from injury. Correct by repairing, replacing or removing this damaged section of wire fencing and by ensuring the wire fencing is securely attached to the fence posts. Correct by April 27, 2017.

This inspection and exit interview were conducted with the facility manager.
