Type: ROUTINE INSPECTION
Date: 09-AUG-2017

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Two animals were identified as in need of veterinary attention during this inspection:

*One young bactrian camel has an open draining wound on its right back lower back leg. The owner reports that he has been treating it topically and that it was healing but now it has reopened. The wound is irregular in shape and about 2 in long and 1 to 1 1/2 in wide. The skin edges appear ragged. The tissue appears red and swollen. The camel is bearing weight and walking on the leg.

*One deer has a blue-ish discoloration to the lower half of her right eye. The owner reports that the color change has been there for a while. He stated he thinks the deer may be getting a cataract.

A veterinarian needs to examine these two animals in order to determine a diagnosis and treatment plan. All medical diagnoses and treatments shall be documented in writing.

3.27(b)

FACILITIES, OUTDOOR.

Four guinea pigs are currently being housed in an outdoor enclosure. Guinea pigs housed outdoors may be vulnerable to predators and adversely affected by the elements (temperatures, humidity, rain, etc). The guinea pigs shall not be housed outdoors unless located in an appropriate climate and approval for such outdoor housing is obtained from the Regional Office. Correct by housing the guinea pigs indoors or obtaining written approval. Correct by 9/9/17.

3.56(a)(1)

SANITATION.

Both rabbit enclosures (one with solid bottom and one with wire bottom) are in need of cleaning. Excreta and food debris has collected on the floor of the solid bottomed enclosure. Excreta has accumulated along the sides and wires of the wire bottom enclosure. Brown discoloration was noted on the bottom of the feet of the light colored rabbits. The enclosures shall be cleaned weekly or more often if necessary depending on the number of rabbits present, in order to prevent odors, soiling of the rabbits' haircoats and spread of disease. Correct by 8/10/17.

Inspection Report

3.131(d)

SANITATION.

Large horse fly type flies were noted landing on and biting the animals including the young bactrian camel with the wound and the zebu. The bactrian camel was noted kicking out with its front legs to try to ward off the fly whenever it landed. Large numbers of stable/house fly type flies were noted in several other animal enclosures. Flies can cause discomfort to the animals and spread disease. The facility shall establish and maintain a safe and effective program for control of insects. Correct by 8/12/17.

The sheep cited on the last inspection has been treated for limping. The alpacas are no longer on the property.

This inspection and exit interview were conducted with undersigned owner.
