Type: ROUTINE INSPECTION
Date: 19-NOV-2015

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A young (approximately 8 months of age) female Burmese Mountain Dog, tag # 61, was observed with an old wound on the right side of her head, which appears to be mostly healed. Upon closer observation this dog is extremely thin. Her vertebrae, front shoulder and leg bones, hip bones, and ribs are easily palpable and are very prominent. The gums of this dog appear to be a very pale pink color. The licensee stated that he had been treating the wound on this dog since the first part of November and noticed that she was thin a few weeks ago. The licensee has not consulted with a veterinarian with regards to the condition of this dog. These signs could be an indication of a medical condition. The licensee was verbally instructed to have this dog evaluated by the close of business today, 19 November 2015, for an accurate diagnosis and treatment plan.

A female French Bulldog, tag #25, was observed with an open lesion above her right eye, approximately 1 inch in diameter and another open lesion above her left eye, approximately ½ inch in diameter. There are also some reddened and inflamed areas in the fold of her skin and under her right eye and muzzle. She also has an area, of approximately 2- 3 inches in diameter, that is reddened and inflamed with some dried crusted material around and inside of the this area, on the left cheek area. There are also some smaller areas, varying in diameter of approximately ½ to 1 inch, of reddened and inflamed areas on her left back leg. The licensee had noticed this condition of this dog on 8 October 2015 and started treating with Cut and Heal . On 22 October 2015 the licensee consulted with a veterinarian and started using Miconazole 1% topical spray . This dog s condition has not been resolved and continues to be affected.

A female French Bulldog, microchip # 010380562, in the same enclosure with French Bulldog, tag #25, was observed with an open lesion, approximately 1 inch in diameter on her forehead in between her eyes. There is some dried crusted material in and around this area. The left eye of this dog has a cloudy opaque area, approximately ½ to ¾ of inch in diameter. The licensee stated that he had started treating the lesion with Cut and Heal and the Miconazol spray but had not noticed the cloudy opaque area in the eye and had not consulted with a veterinarian about the condition of this dog. The skin lesion could be a sign of a medical condition or injury. The cloudy opaque area of the eye could be a sign of an injury or other medical condition.

The two French Bulldogs must be evaluated by a veterinarian by 23 November 2015

The licensee must provide documentation of these evaluations to the inspectors upon request. The licensee must ensure that all animals receive adequate veterinary care at all times.

Inspection Report

3.3(a)

SHELTERED HOUSING FACILITIES.

Heating

The inside area of the sheltered facility was not sufficiently heated and affected 19 dogs. The temperature at the time of inspection was measured at 42.2 degrees Fahrenheit (with a Kestral 3000). Temperatures that fall below the required 50 degrees Fahrenheit could have a detrimental health impact on the dogs. The temperature inside of a sheltered facility must not fall below 50 degrees Fahrenheit. The licensee must increase the ambient temperature inside the sheltered facility to at least 50 degrees Fahrenheit. The licensee must ensure that the temperature inside of the sheltered facility does not fall below 50 degrees Fahrenheit.

To be corrected by: 20 Nov 15

Inspection and exit interview conducted with licensee and ACI Stephanie Osborne.
