Customer ID: **2619**
Certificate: **33-C-0176**
Site: 001
SUMMERFIELD FARM

Type: ROUTINE INSPECTION
Date: 20-OCT-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility had one expired bottle of West Nile Virus Vaccine (expired 8/21) and four expired bottles labeled "Pink Scour Medicine" (all expired in 2020) on hand. These expired medications, if used, could be ineffective for the prevention and treatment of diseases. Assure appropriate methods are used to prevent and treat diseases, including timely identification and disposal of expired medications.

Correct by: 10-23-21

3.125(a)

Facilities, general.

The river otter pond is leaking and must be refilled every two to three days as per the facility representative. The pond's water level was two to three feet below normal water level during the inspection. The low water level barely allows the otters to submerge themselves into the water while swimming. The facility representative indicated the pond liner has been repaired multiple times because of leaks. Ensure the pond is maintained in good repair.

Correct by: 7-31-22

The fence around the pen containing the goats and llamas is in disrepair. One section of chain link fence has detached from the wood panel bottom. The resulting gap could the allow animals escape if not repaired. Repair or replace the affected section of detached fence.

Inspection Report

Correct by: 10-25-21

In the outdoor hyena enclosure, there is a large hole in the ground next to the access building. The hole is filled with dirty water. The hyena moved rocks from the area and dug the hole as per the facility representative. The facility representative also indicated the water is the result of rain runoff from the roof. The hole and dirty water are a potential hazard to the animal. Ensure the hyena enclosure is maintained in good repair.

Correct by: 11-12-21

3.127(d)

Facilities, outdoor.

One section of the perimeter fence is not six feet tall. The non-public entrance into the facility comprises part of the perimeter fence. This entrance has a livestock gate that is less than six feet tall and has spaces between the bars large enough for unauthorized persons and animals to go through it. The gate previously had metal paneling attached that was six feet tall and prohibited unauthorized persons and animals from gaining access to the facility. The facility representative indicated the paneling was damaged by a lawn mower and subsequently removed, but never replaced. This area of the perimeter fence must be repaired or replaced.

Correct by: 11-12-21

3.131

Sanitation.

Excessive amounts of string algae were present in the river otter pond during the inspection. Both otters were observed swimming through the algae. One otter had some algae on its head when it exited the water and proceeded to the exhibit window. Excessive algae could make the animals ill. Remove the algae and maintain the otter pond to minimize disease hazards.
