JEROME & NANCY PACKER

Type: ROUTINE INSPECTION
Date: 04-AUG-2014

2.40(b)(2) DIRECT REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** An adult golden sable female Lhasa apso named "Hillary" (ID # 107 273 106), previously cited under 2.40 (b)(2) on the July 22, 2014 inspection report, still has a greenish-tan discharge on about 30 percent of the surface of the left eye and around the edges of the eyelids. Some of this discharge has dried to a crust around the edge of the eyelids and is crusted in the fur on the inner corner of the eye. This dog has not been evaluated by a veterinarian as instructed in the July 22, 2014 inspection report and has received no treatment. Licensee reports they did not have this dog seen by the veterinarian due to the licensee's misidentification of a different Lhasa apso.

Eye problems can be an indicator of injury, disease, allergies or irritation, and can be painful and/or itchy, and can affect the health and well-being of the animal.

The licensee must consult with a veterinarian for proper diagnosis and to develop and follow a treatment plan. The licensee must document the veterinarian's findings; the treatment plan that is followed, and have the records available to the inspector upon request.

>>>>>

The licensee stated the following dogs were evaluated by a veterinarian, and the licensee's documentation of the phone conversation between the licensee and the veterinarian was provided. The documentation of the phone conversation did not provide details of when these dogs would be treated:

*** An adult red male long-haired Chihuahua named "Felix" (ID # 100 853 787), still has a thick, brownish gray material covering the molars on his right side. The gums are receding, and have a creamy white discharge at the gum line. On the left side, the upper gums are reddened and it appears that most of the molars and cheek teeth are missing. The entire mouth could not be visualized due to the reluctance of the dog to let the inspector view his mouth.

*** An adult black and tan male Yorkshire terrier named "Johnnie" (ID # 096 625 867), still has a thick, grayish-brown material adhered to his upper molars, canines and front teeth on both upper sides, and a moderate

Inspection Report

amount on all the lower teeth. The cheek teeth on the left side have receding gums, and a cheek tooth on the right side is missing. The upper right molar has a white, creamy discharge at the gum line.

*** An adult silver and tan female Yorkshire terrier named "Janelle" (ID # 069 310 367), still has a thick, grayish-brown material covering all surfaces of upper molars, on the cheek teeth that are present, and front teeth. The lower teeth have a moderate amount of this material adhered to the teeth. The gums on both upper sides of the teeth are reddened, swollen, and receding away from the teeth. Above the upper right molar, there is a creamy white discharge. Also, above the upper right canine tooth there is hair matted in the gum line.

Dental problems can be painful, make it difficult to eat, lead to the development of other health problems, and can affect the health and well-being of the animal.

Based on the licensee's notes regarding their conversation with the veterinarian, it is unclear if these dogs will be treated or not. Given that dental problems worsen over time and can be painful the licensee must ensure that these dogs will receive appropriate treatment. The licensee must obtain and follow a treatment plan from the veterinarian for these dogs.

This is a focused inspection to specifically address the direct, repeat non-compliant items cited under 2.40 (b)(2) from the inspection dated July 22, 2014. Of the six dogs cited, the following two were evaluated by a veterinarian and documentation was provided.

*** An adult tan and white male Chihuahua named "Checker" (ID # 107 059 817).

*** An adult female black and white Chihuahua named "Mindy" (ID # 264).

The inspection and exit interview were conducted with a facility representative.
