Type: ROUTINE INSPECTION  
Date: 13-JAN-2015

### 2.75(b)(1)

#### RECORDS: DEALERS AND EXHIBITORS.

The sale records (Record of Acquisition, Disposition or Transport of Animals APHIS form 7020) are not filled out completely. The species of animals (such as guinea pig) were not listed on the majority of the sale forms since the inspection report dated February 25, 2014. The transportation method was not listed on most of the sale records to determine if the buyer or dealer transported the animals. The sale forms must include the number and species in the shipment and the method of transport (such as buyer's truck or dealer's truck) to document changes in ownership. Dealers must keep the required records so the information is available to track animal shipments when necessary for health and regulatory purposes.

Correct from this day forward.

### 3.30

#### WATERING.

There were accumulations of feces, dirt and brown debris by some of the automatic water valves especially underneath the valve along the PVC drainpipe. These accumulations around the water valves expose the guinea pigs to potential disease infections with bacterial, fungi and parasites. Water receptacles such as automatic water delivery lines must be cleaned and sanitized whenever dirty and at least once every two weeks. Inadequate cleaning of the automatic water valves can result in contamination of the guinea pigs in the same enclosure and located in lower enclosures from those above. Licensee must establish and maintain a program to keep the water valves sanitized when dirty, and must be sanitized at least once every two weeks.

Correct by January 16, 2015

An exit briefing was conducted with the owner.
