Site: 001
HENRY FAMILY FARMS LLC

Type: ROUTINE INSPECTION
Date: 23-JUN-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Two goats have excessively long hooves. The first was black, white and tan in color, and is housed with seven goats and six deer in the large stall. All four of the goat's hooves were overgrown by at least two inches while the overgrowth on the front two hooves were worse than the rear hooves. The second goat, white and tan in color, is housed with another goat in the smaller stall adjacent to the pigs. All four of the goat's hooves were overgrown by at least one inch. Overgrown hooves can cause pain and difficulty while walking for the animals.

Trim the goats' hooves and repeat often enough to prevent overgrowth.

To be corrected: 6-29-21

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

The records for the acquisition and disposition of the animals and the documented program of veterinary care were not available for inspection. The licensee indicated all the records were not available during the inspection. Records for the acquisition and disposition of the animals and the documented program of veterinary care are necessary ensure animals are receiving proper veterinary care and to track animals entering and leaving the facility.

Ensure the records are available for inspection.

To be corrected: 7-1-21

Inspection Report

3.56(a)(1)

Sanitation.

The rabbit stall contained abundant amounts of compacted feces, soiled bedding, fur, and cobwebs. The stall contains eight rabbits and the floor contains approximately 12 inches of compacted feces and soiled bedding, topped with a layer of clean bedding. The cobwebs and animal fur were observed all along the stall walls. Excessive feces, fur, and cobwebs can produce odors and harbor disease.

Thoroughly sanitize and clean the enclosure and repeat often enough to prevent build up.

To be corrected: 7-1-21

3.131(a)

Sanitation.

The chinchilla enclosure contained excessive feces, fur, and cobwebs. The wooden enclosure shelves contained excessive amounts of feces. The bottom of the enclosure contained approximately six inches of compacted feces and soiled bedding, topped with a layer of clean bedding. Additionally, excessive cobwebs and animal fur coated the front 2/3 of the enclosure. Excessive feces, fur, and cobwebs can produce odors and harbor disease.

Thoroughly sanitize and clean the enclosure and repeat often enough to prevent build up.

To be corrected: 7-1-21

3.131(d)

Sanitation.

Excessive flies were present in the barn, inside of the camel stall, and inside of the skunks' stall. In the camel's stall, the flies were concentrated on the animal's legs and on the floor. In skunks' stall, the flies were concentrated on the floor, on the animals' food dish, and on the transport kennel being used as a hiding space. The facility had three fly attractant bags in place during the inspection, but they were not effectively controlling the fly population. Additionally, none of these of these bags were near the stalls where the flies were concentrated. Flies can carry and spread disease.
