Type: ROUTINE INSPECTION
Date: 25-SEP-2023

3.125(a) Critical

Facilities, general.

On Feb 19, 2023, an 8-year-old female giraffe injured her neck by tangling her ossicones in rope fencing/barrier. According to facility representatives, present employees attempted to assist the animal, but her death was quick. According to the Attending Veterinarian the probable cause of death was capture myopathy secondary to stress from the neck injury. Indoor and outdoor housing facilities must be structurally sound and protect the animals from injury. The facility has implemented corrective actions to protect the remaining giraffes.

This inspection and exit interview were conducted with facility representatives.
