Type: ROUTINE INSPECTION
Date: 29-APR-2024

3.125(a)

Facilities, general.

The primary enclosure housing two caracals is in disrepair. The fence that is used to separate the two caracals, or used to separate the animals for safe cleaning has a hole in it that is approximately six inches in diameter. There is another area of fence next to the sliding door to close the two sides of the enclosure that has been bent back. Both of these areas have sharp points.

Facilities that are not maintained in good repair and that have sharp points can cause injury to the animals inside the enclosure.

The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

To be corrected by May 7, 2024

This inspection and exit interview were conducted with a facility representative.
