Site: 002
RODNEY BAUMAN

Type: ROUTINE INSPECTION
Date: 21-APR-2022

3.28(a)(1)

Primary enclosures.

There are five hamster enclosures with large cracks that have caused gaps up to 5mm in width. In all the enclosures, the cracks start at the metal ring surrounding the hole that is intended to be used with automatic water lines.

Cracks and gaps in primary enclosures can cause structural instability and make it difficult to clean the enclosure which can adversely affect the health of the hamsters.

The licensee must ensure that the primary enclosures are structurally sound and maintained in good repair to protect the hamsters from injury.

Correct by: May 5, 2022.

This inspection and exit interview were conducted with the licensee.
