Type: ROUTINE INSPECTION
Date: 03-FEB-2014

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written program of veterinary care is incomplete. Although the licensee appears to be addressing the vet care needs for the wolf dogs, steer, and camel, however the written program of vet care does not state what program to follow. The parasite control section only states monthly and bi monthly, nothing else. It does not state what products to use for parasite prevention or fleas, ticks and mites. The written PVC does not address any vaccinations or any other treatment required for the steer and camels if any. There are no preventive measures stated on the written PVC for heart worm for the wolf dogs. The licensee states she is given ivermectin every two months for parasite control, however there is no proof this is being provided. The licensee is using cattle strength ivermectin for parasite control, however there is no written documentation on the PVC, showing the amount used for these animals. The attending veterinarian needs to state how often he is to visit the facility and what vet care needs to be provided for these animals to ensure an appropriate vet care plan is being provided and followed.

TO BE CORRECTED BY' FEBRUARY 20, 2014.

3.127(a)

FACILITIES, OUTDOOR.

The transport trailer that houses the steer is not large enough to turn about freely and to make normal postural adjustments. I observed the steers back side and nose have contact with the metal enclosure. The steers horns also had contact with the enclosure numerous times while he was standing still. Continuous contact with the steers body parts may cause skin problems or possible injury due to his horns getting caught in the opening of the enclosure. This steer needs to be able to travel comfortably, without having contact with this enclosure.

TO BE CORRECTED BY: FEBRUARY 20, 2014.

Inspection Report

Exit interview conducted with the licensee in Charlotte County, Florida.

3.128

SPACE REQUIREMENTS.

The camel did not have sufficient space for social adjustments with adequate freedom of movement during this inspection. The camel was tethered to the transport trailer during this inspection. The section of rope was approximately 3 feet in length, not giving the camel enough space for social adjustments with adequate freedom of movement. I observed the camel lay its own excreta due to lack of space provided. I also observed one of the horses attempt to kick the camel, not allowing the camel enough space to prevent a potential injury.

TO BE CORRECTED BY: FEBRUARY 6, 2014.

3.137

PRIMARY ENCLOSURES USED TO TRANSPORT LIVE ANIMALS.

The enclosure that houses the steer in the transport trailer is not large enough for animal to turn around freely and to make normal postural adjustments. I observed the steers back side and nose have contact with the metal enclosure. The steers horns also had contact with the enclosure numerous times while he was standing still. Continuous contact with the steers body parts may cause skin problems or possible injury due to his horns getting caught in the opening of the enclosure. This steer needs to be able to travel comfortably, without having contact with this enclosure.

TO BE CORRECTED BY: FEBRUARY 15, 2014.

Exit interview conducted with the licensee in Charlotte County, Florida.
