Type: ROUTINE INSPECTION

Date: 04-APR-2017

3.125(a)

FACILITIES, GENERAL.

The pasture housing the goats and cow has wire fencing that does not contain the goats. During this inspection numerous goats were escaping out of the enclosure at the bottom due to the wide openings.

The fencing must be constructed of such material and of such strength as appropriate for the animals involved. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

TO BE CORRECTED BY: IMMEDIATELY.

3.127(b)

FACILITIES, OUTDOOR.

The current shelter for the goats and cow does not provide adequate protection from the rain all at one time. The shelter does not provide protection from the cold during the winter months and wind, especially for the baby goats.

During this inspection the adult cow walked under the shelter and the goats moved due to the lack of space available. Shelter shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals. It was discussed that several cement culverts could be added to the enclosures for adequate shelter from inclement weather.

3.129(a)

FEEDING.

The roll of hay placed in the goat and cow pasture does not have a cover over it to protect it from getting wet and potentially moldy. Eating moldy hay may cause illness / disease in animals. Food shall be protected from contamination to maintain all animals in good health.

TO BE CORRECTED IMMEDIATELY.

WATERING.

The pasture housing all goats has a dirty water and receptacle. The receptacle is lined with a thick brown and green substance. This dirty drinking water is not potable and may cause illness, parasites and other diseases. Potable water must be provided as often as necessary for the health and comfort of the animal. All water receptacles shall be kept clean and sanitary.

TO BE CORRECTED BY: IMMEDIATELY.

This inspection and exit interview were conducted with the office clerk.
