CHAMPAIGN

Type: ROUTINE INSPECTION

Date: 11-JUN-2025

2.33(b)(4)

Attending veterinarian and adequate veterinary care.

On October 1st & 3rd, 2024 expired anesthetic agents were used on a total of 19 pigs for sedation prior to surgery, sedation prior to euthanasia and for euthanasia. This issue was identified during a controlled substance audit by the facility.

Use of anesthetic agents for sedation, anesthesia and euthanasia is always a risk, and it is not possible to predict how each animal will respond. Although the intended outcome was achieved in the animals, the use of expired anesthetic agents increases the risk that animals may not respond to the agents as intended/anticipated, and therefore, increase the risk of a negative impact on their welfare.

Each research facility must establish and maintain programs of adequate veterinary care that provide adequate guidance to personnel involved in the care and use of animals regarding handling, immobilization, anesthesia, analgesia, tranquilization, and euthanasia.

To be corrected going forward from or on June 13, 2024

3.10(a)

Watering

On February 14, 2025, at 8:30am two adult dogs were found by animal care staff in holding crates, intended as temporary holding enclosures while their primary enclosures were being cleaned. The dogs were in a dog housing room with no access to water, having been in the crates overnight. The dogs, which had no prior health concerns, were examined by a staff veterinarian that same morning with no signs of dehydration or ill effect.

Constant access to potable water is necessary to ensure that dogs remain hydrated as needed throughout the day. The facility must ensure that all dogs have continuous access to potable water, unless restricted by the attending veterinarian or except as provided in 3.17(a).

To be corrected going forward from or on June 13, 2025.

This inspection and exit interview were conducted with facility representatives.
