CLYDE HORST

Type: ROUTINE INSPECTION
Date: 25-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

**A female English bulldog with tag number 331 was observed to have bright red protrusion of tissue between the digits on all of her four feet.

**A female English bulldog with tag number 71 was observed to have a bright red protrusion of tissue between the digits on her two front feet.

Facility representative stated that they had noticed the tissue protruding, but did not seek veterinary attention due to having the issue in the past and the issue resolving on its own.

Failure to have the issue addressed by the attending veterinarian can result in pain and discomfort to the animals. Further, having an abnormal gate can result in musculoskeletal changes which can cause additional discomfort to the animals.

The animals must be evaluated by the attending veterinarian and the prescribed treatment must be administered.

Correct By: June 30, 2014

**A female Maltese with tag number 046 was observed to have an opaque appearance to the right eye which was enlarged.

Facility representative stated that they had noticed the eye however, the same condition had occurred in other dogs in the past with prescribed treatment not resolving the issue.

This condition may be causing pain and discomfort to the animal.

The animal must be evaluated by the attending veterinarian and the prescribed treatment must be administered.

Inspection Report

Correct By: June 30, 2014

2.75(a)(1)(4)

RECORDS: DEALERS AND EXHIBITORS.

The 7006 disposition form containing the sale of dogs 576-578 was incomplete; box 4 did not have a complete name and address of the buyer.

Failure to provide the required information does not allow for proper tracking of animals by an APHIS official.

All records of disposition must be complete and accurate at the time of sale.

Correct from this day forward.

3.6(a)(2)(1)

PRIMARY ENCLOSURES.

Broken wires were observed extending inward around most of the cut outs for the food receptacles and on several of the floors of the enclosures.

Broken wire can pose a physical hazard to the animals.

These areas must be removed or replaced and maintained on a routine basis.

Correct By: July 16, 2014

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Several of the enclosures had food receptacles that were no longer being used and had not been removed. These food receptacles are full of dirt, debris, and cobwebs.

Not properly cleaning and disinfecting the food receptacle at least once every two weeks can increase disease risk.

The unused food receptacles must either be cleaned and sanitized or removed from the enclosures.

Correct By: July 9, 2014
