Type: ROUTINE INSPECTION
Date: 12-NOV-2024

2.131(b)(1)

Handling of animals.

One young male red kangaroo is currently not in its primary enclosure but is still contained within the property's perimeter fence. The facility reports that while moving the kangaroos, one young one jumped over the fencing panel and ran off to another area of the property. The facility has consulted with their attending veterinarian and has tried to get close to it but hasn't had success in capturing it so that it can be moved to the primary enclosure with the others. Handling methods that allow an animal to get away from primary enclosures and the necessary process of recapturing can cause behavioral stress to the animal. Ensure to improve methods of moving kangaroos to prevent this type of incident and work closely with the attending veterinarian on recapturing the young kangaroo without causing it unnecessary behavioral stress.

***Correct from 11/12/2024 forward.

3.153(a)(1)(i)

Primary enclosures.

The primary enclosures for the Moluccan cockatoos and hybrid macaw had some loose wire and wire points that the birds could contact. Loose wire and wire points could cause injury. Ensure the enclosures are maintained in good repair to prevent risk of injury.

***Correct by 11/13/2024.

This inspection and exit interview were conducted with facility representatives.

Additional Inspectors:

SCOTT WELCH, VETERINARY MEDICAL OFFICER
