Type: ROUTINE INSPECTION
Date: 03-FEB-2015

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The first raccoon enclosure houses three raccoons. The male raccoons' tail is red, losing hair, and was observed chewing on it. The licensee stated he has not been in contact with the vet and this raccoon has not been seen by the attending veterinarian.

The red fox housed with two other fox has red, cloudy, crusty, matted, eyes with yellow/green discharge which may be signs of a health problem for the animal.

Daily observation of the animals is needed to recognize when there are injuries or health issues. There must be regular direct communication with the attending veterinarian whenever injuries or health issues arise.

The raccoon and the fox, both must be seen by the attending Veterinarian, to ensure the health and well being of these animals.

To be corrected by Feb. 9th, 2014.

3.52

FACILITIES, OUTDOOR.

Sec. 3.52 Facilities, outdoor.

The 7 Rabbits are in one large enclosure. This enclosure contains no bedding box, or shelter box, to protect the animals from the wind, rain, and cold. Exposure to the harsh elements may cause distress and health issues for the rabbits. There must be provided shelter and protection from the elements for the animals.

To be corrected by Feb. 8th, 2015.

3.75(c)(3) REPEAT

HOUSING FACILITIES, GENERAL.

Sec. 3.75 Housing facilities, general.

(c) Surfaces(3) Cleaning.

There is an accumulation of fecal material in the shelter for a pair of rhesus macaques. Accumulations of feces may attract unwanted insects, and be a disease hazard. The primary enclosures should be spot cleaned daily and cleaned and sanitized as often as necessary to protect the health and well-being of the nonhuman primates.

Inspection Report

3.78(b) REPEAT

OUTDOOR HOUSING FACILITIES.

Sec. 3.78 Outdoor housing facilities.

(b) Shelter from the elements. There are numerous nonhuman primate enclosures and shelters that do not provide adequate protection from the rain, wind and cold. The shelters for the ringtail lemurs, most rhesus macaques, vervets, and javan macaque also did not have a heat source for when the ambient temperature falls below 45 deg. F. The night before this inspection the temperature dropped below 45 deg. F for more than 4 hours according to the published weather data. Exposure to rain, wind and cold can cause discomfort and be a health hazard to the nonhuman primates. Outdoor housing facilities must provide adequate shelter from any weather conditions that may occur and heat must be provided when the ambient temperature falls below 45 deg. F for more than 4 hours to ensure the health and well-being of the animals.

3.80(a)(1)

PRIMARY ENCLOSURES.

Sec. 3.80 Primary enclosures.

(a) General requirements. (1)

The shelter for the individually housed male rhesus macaque in the back of the facility is lying on the ground and pulled apart. He currently does not have adequate shelter because of this and may injure himself on it. The primary enclosures must be designed and constructed of suitable materials for the species of nonhuman primates contained in them and maintained in good repair.

To be corrected by February 5, 2015.

3.81(a)(1)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

Sec. 3.81 Environment enhancement to promote psychological well-being.

(a) Social grouping.

The javan macaque, capuchins, pig-tail macaque, marmosets, and three rhesus macaques are being housed individually. Specific provisions to address the social needs of individually housed non-human primates which are known to group socially in nature must be addressed in the environmental enrichment plan and directed by the attending veterinarian. The reasons they are unable to be group housed must also be specified.

To be Corrected by March 15, 2015.

3.125(a)

Inspection Report

FACILITIES, GENERAL.

Sec. 3.125 Facilities, general.

(a) Structural strength.

Throughout the facility, there are areas with broken wire, sharp wire points, and on the kangaroo fencing, the wire is bent down and in disrepair. The housing provided for the fox is chewed and in disrepair. These areas can be an injury hazard and cannot be cleaned or sanitized properly. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

To be corrected by March 3, 2015.

3.127(d)

FACILITIES, OUTDOOR.

Sec. 3.127 Facilities, outdoor.

(d) Perimeter fence

The wallaby enclosure has one side of its enclosure fencing that is up against the facility perimeter fencing and another side without a perimeter fence. There is no space barrier to stop the public or unwanted animals from gaining direct access to the wallaby. The perimeter fence must be of sufficient distance from the outside of the primary enclosure or at least 3 feet to prevent physical contact between animals inside the enclosure and unwanted animals or persons outside the perimeter fence. A perimeter fence less than 3 feet from the primary enclosure must be approved in writing by the administrator.

To be corrected by May 1, 2015.

3.131(a) REPEAT

SANITATION.

Sec. 3.131 Sanitation.

(a) Cleaning of enclosure

The bobcat enclosure, containing 2 animals, and the raccoon enclosure, containing 3 raccoons, has a build up of feces within their enclosures. This contamination of feces can create a disease hazard for the animals. Excreta should be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

3.131(c)

SANITATION.

Sec. 3.131 Sanitation.

Inspection Report

(c) Housekeeping. Premises (buildings and grounds).

Within the perimeter fencing of the facility, and along the outside of the perimeter fence, there are accumulations of building supplies, pipes, wire, wood, broken animal crates and other debris. There are weeds and grass growing in, through, and around the debris. Although most of the debris are supplies used in animal husbandry, it is stored in a manner of disorder. Rodents and pests can live and build living areas in the accumulations of debris around the facility.

There is an accumulation of dog waste that was washed out of a dog kennel onto the ground and near the regulated animal enclosures. This waste may harbor bacteria, attract unwanted insects and create a disease hazard.

The facility shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices. Accumulations of trash and waste shall be placed in designated areas and cleared as necessary to protect the health of the animals.

To be corrected by March 3rd 2015.

This inspection and exit briefing were conducted with the licensee and two Animal Care Inspectors.
