SIERRA NEVADA ZOOLOGICAL
SOCIETY

Type: ROUTINE INSPECTION

Date: 24-MAY-2021

3.80(a)(2)(ix)

Primary enclosures.

On the door entering the baboon night enclosure, areas of exposed wood were noted on the outside surface and along the edge where the hinges are attached. Inside the night enclosure, the concrete block is exposed and unsealed in multiple areas. Primary enclosures must be constructed and maintained so that all surfaces in contact with the nonhuman primates can be readily cleaned and sanitized.

Correct by June 30, 2021

3.81(c)(1)

Environment enhancement to promote psychological well-being.

The facility had a new vervet infant born approximately one month ago. Although the facility does have an environmental enhancement plan for their primates, considerations for the new infant had not been added or approved by the attending veterinarian. Certain primates must be provided special attention regarding enhancement of their environment, based on the needs of the individual species and in accordance with the instructions of the attending veterinarian.

Correct by June 7, 2021

3.84(c)

Cleaning, sanitization, housekeeping, and pest control.

Inspection Report

In the off exhibit holding area behind the nonhuman primate enclosures and adjacent to the perimeter fence behind the baboon enclosure, there are two very large piles of construction debris composed mostly of chain-link fencing, fence paneling, and other materials piled up approximately 6 x 4 x 50 feet.

Grass, weeds, and other plants were overgrown around the entire facility.

Premises must be kept free of accumulations of trash, junk, waste, and discarded matter, including buildings and surrounding grounds in order to protect the nonhuman primates from injury. Weeds, grass, and bushes must be controlled to facilitate cleaning and reduce or eliminate breeding and living areas for rodents, pests, and vermin.

Correct by June 30, 2021

3.125(a)

Repeat

Facilities, general.

A barrier fence surrounding the viewing area of the domestic farm animal section of the facility had multiple sharp points of wire protruding through the hog panels used to patch several holes in the bottom of the barrier. The animals in this section are kept within several separate smaller primary enclosures within this section of the facility. Several baby goats were noted outside of their enclosures, making the barrier fence part of their primary enclosure.

The facility must be constructed of such material and of such strength as appropriate for the animals involved. The facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

This inspection and exit interview were conducted with the facility representative
