Type: ROUTINE INSPECTION
Date: 12-DEC-2023

3.131(c)

Sanitation.

There is significant clutter in the field area near the food storage barn and goat enclosure. This area contains excess items, including old machinery, batteries, fencing materials, tires, chemicals, and piles of wooden pallets. Additionally, there are various miscellaneous items stacked on top of these piles. Piles of debris like this can harbor insects and vermin that could injure the animals or cause disease.

Failure to clean the premises can lead to health hazards and contribute to the development of pest breeding and living areas. Keeping the premises clean is essential to protect the animals from health hazards, minimize breeding and living areas for pests, and facilitate good husbandry practices. Correct by January 9, 2024.

3.131(d)

Sanitation.

The facility's current pest control program is ineffective. The large barns which contain multiple primary enclosures housing primates had many rodents and rodent droppings present. The rodents were observed inside and on top of the enclosures. Pests can transmit disease, contaminate food and surfaces, and can harm animals. The facility must establish and maintain an effective program for the control of insects, ectoparasites, and avian and mammalian pests. Correct by December 29, 2023.

This inspection and exit interview were conducted with a facility representative.
