

## Inspection Report

Peace River Refuge & Ranch Inc  
640 Ne 170th Ct  
Silver Springs, FL 34488

Customer ID: 10561

Certificate: 58-C-1142

Site: 001

PEACE RIVER REFUGE & RANCH INC

Type: ROUTINE INSPECTION

Date: 14-JUN-2016

### 3.80(a)(2)(2)

#### PRIMARY ENCLOSURES.

The primary enclosure housing five lemurs (3 ring-tailed and 2 brown lemurs), had shade material draped over a portion of the cage. There were loops of tie-down strings along the edge of this material and portions of that string were hanging down into the cage. The hanging string formed multiple loops which were large enough for a lemur to get their hands or heads through. These dangling loops pose a risk of entanglement for the animal and there is concern that one or more of them could get their head caught and strangle itself if it became entangled. Primary enclosures must be constructed and maintained so that they protect the nonhuman primates from injury. The shade material should be affixed in a manner that will not create a danger to the animals, or it should be replaced, repaired, or otherwise adjusted so as to correct the hazard.

Correct by: Corrected by the end of the inspection.

### 3.129(a)

#### FEEDING.

A food storage area adjacent to the main kitchen and food preparation area was in disrepair. There were several covered cans with stored animal food present. This portion of the building had damage to the ceiling with large areas of exposed and torn insulation hanging down directly over the food storage bins. The room was also being used as a general storage area, was cluttered, and contained cleaning supplies and many gallon-sized containers of bleach just a few feet from the food bins. The deteriorated state of the storage room, exposed and hanging insulation, and the presence of cleaning chemicals in close proximity creates a risk of contamination of the stored food. Food shall be wholesome, palatable, and free of contamination. The food storage bins should be moved to a different location that is compliant, or this storage room should be repaired and exposed insulation removed or covered and potentially hazardous chemicals removed.

Correct by: Corrected by the end of the inspection.

This inspection was conducted By Dr. Suzan Loerzel on 6/14/2016 with the Facility President, and completed on 6/15/2016 with the Facility Vice President. A preliminary exit interview was conducted with the facility President on 6/14/2016 and the final interview with the Vice President on 6/15/2016.
