### 3.84(d) Repeat

#### Cleaning, sanitization, housekeeping, and pest control.

The enclosure housing one adult female ring-tailed lemur named, "Sophia," has several holes chewed through the back wall by rodents. A wild mouse was seen entering the inside of the enclosure through one of the holes during the inspection.

Wild rodents can harbor parasites and disease causing microbes that can contaminate food and cause injury or illness to the animals. The licensee must establish and maintain a safe and effective program for the control of insects and mammalian pests.

This inspection and exit interview were conducted with facility representatives.
