Certificate: **73-A-2539**
Site: 001
BARBARA GILBERTSON

Type: ROUTINE INSPECTION
Date: 16-JUL-2014

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

Along the rear wall of the shelter building, the lower edge of the structure is rusted in multiple areas. The material has flaked away to form holes and rough edges all along the wall. These areas are below the indoor/outdoor access doors and along the adjoining walls. Material that has rusted to this degree cannot be adequately cleaned, and flaking of the rusted metal may result in sharp points and edges which are a potential source of injury to the enclosed animals. These rusted areas need to be repaired or replaced, and properly maintained in the future.
Correct by: 15 August 2014

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

In an enclosure housing corgis, the interior run contained a large web which had trapped several dead insects. Though not in direct contact with the enclosed animals, this is a potential source of contamination to any animals beneath the webbing and is also an indication that the interior run is not being cleaned adequately. The webbing must be removed, and all dog housing areas must be cleaned as often as necessary to protect the health and well being of the enclosed animals.
Correct by: 17 July 2014

Inspection and exit interview conducted with facility representative.

Additional Inspectors

West Jerry, Animal Care Inspector
