

Inspection Report

Temple Of Isis
20889 Geyserville Ave.
Geyserville, CA 95441

Customer ID: **328120**
Certificate: **93-C-1014**
Site: 001
Temple of Isis

Type: ROUTINE INSPECTION
Date: 30-JAN-2018

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written Program of Veterinary Care has not been reviewed since September 2016, which was also the last time the Attending Veterinarian visited the site.

The written Program of Veterinary Care should be reviewed and updated at least once per year. The Attending Veterinarian should visit the site, and provide guidance on animal care issues, on a regular basis; at minimum annually. Failure to conform to these requirements could have a negative impact on the health and well-being of the animals.

The facility should work with the Attending Veterinarian to update the written Program of Veterinary Care, schedule regular visits with the Attending Veterinarian, and ensure that the animal care procedures outlined in the written Program of Veterinary Care are followed, in order to advance the health and well-being of the animals.
To be corrected by 3/1/18.

3.125(a) REPEAT

FACILITIES, GENERAL.

The enclosure for the goats contained elements that are potentially hazardous to the animals:

- The wire mesh panels that comprise the gate and fencing are sagging, and present a risk for entanglement or escape.

Some of the exotic feline enclosures were in need of repair:

- In the inside shelter enclosure for "Mystery" the linoleum on the floor was peeling, and deteriorating.
- Some feline enclosures had wire mesh panels that were damaged, exposing pointed wire ends, and openings that pose a risk of entanglement.

Enclosures should be maintained in good repair in order to protect the animals from injury and / or escape. Sharp objects could cause injury, and sagging or damaged wire panels could result in injury from entanglement, or escape. Deteriorating surfaces present an ingestion risk, threaten structural strength, and impede cleaning.

Inspection Report

Animal enclosures should be free of objects that could cause injury to the animals. Enclosures should be maintained in good repair, so that they can be kept clean. Enclosures should be regularly repaired so as to maintain their structural integrity and prevent escape or injury.

3.125(c)

FACILITIES, GENERAL.

The hay was stored in a small shed that was open, and the hay was strewn about, onto the ground. There were chickens scratching through the hay. Some of the hay was discolored and clumped together, suggestive of mold.

Food should be stored in a manner which adequately protects it against deterioration, molding, or contamination by vermin. Failure to properly store animal food could be detrimental to the animals. Contaminated / deteriorated food shall be discarded, and all food shall be stored properly from this time forward.

3.131(d)

REPEAT

SANITATION.

Throughout the facility there was evidence of a severe rat infestation, including the presence of rat feces in animal enclosures, especially near feline food bowls. One rat was observed sitting on top of an exotic feline enclosure in broad daylight.

Vermin can transmit disease and contaminate food. Rats could bite felines that attempt to hunt them. The presence of rat feces around food and bedding is unsanitary. The facility should work with professional exterminators to address this serious vermin infestation.

This inspection was conducted by Dr. Smith, with the facility director. An exit interview was conducted on 2/6/18 and was additionally attended by Dr. Gage, Big Cat Specialist, and the Attending Veterinarian for the facility.
