Site: 001
LARRY ALBRECHT

Type: ROUTINE INSPECTION
Date: 21-SEP-2021

2.40(b)(2) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Male Maltese "Micky Boy" (microchip #933000320456813) was examined and found to have dark brown tartar buildup covering the entire surface on both the left and right lower cheek teeth. The upper canine teeth had a buildup of dark colored tartar along the gum line and extending half way down the teeth. Several of the lower cheek teeth on both sides were loose and moved easily when touched by the inspector. The gums under these teeth are receding and inflamed and bled during the examination.

Poor dental health could cause pain and discomfort to the dog, as well as lead to further health issues. This dog must be evaluated by a licensed veterinarian for a proper diagnosis and to develop an effective treatment plan. The diagnosis and treatment plan must be documented in writing and available to the inspector upon request. The licensee must ensure that all dogs receive adequate veterinary care.

Correction date: September 24, 2021

This inspection and exit interview were conducted with the licensee.
