LIBERTYVILLE, IL 60048

Customer ID: **2515**
Certificate: **33-C-0034**
Site: 001
THE LAMBS FARM INC

Type: ROUTINE INSPECTION
Date: 19-AUG-2024

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

The licensee was unable to find the Program of Veterinary Care. Not being able to produce a Program of Veterinary Care during inspection doesn't allow for APHIS officials to ensure the animals are being cared for as per the instructions of the Attending Veterinarian. The licensee must find and produce the Program of Veterinary Care at the next inspection. If the Program of Veterinary Care can't be found, then the licensee must have the Attending Veterinarian fill out a new Program of Veterinary Care. Correct starting on 9/2/24.

2.131(b)(1) Critical

Handling of animals.

On 3/23/24, a 10 year old Nubian goat (named "Hey Dammit") was euthanized. The day before the goat was kept outside of its stall for approximately 1-2 hours while staff cleaned the inside of the enclosure. During this time, the goat did not have access to any shelter. The temperature was approximately 32 degrees Fahrenheit and the facility representative reported to me that there was a sleety rain during that time also. The goat was found to be laying in a corner of its enclosure and was struggling. The facility representative reported to me that the goat was hypothermic. The goat was treated per the attending veterinarians instructions and stabilized for a short while. However, the next day the goat started seizing and it was decided to euthanize the goat. I asked the facility representative if the goat had not been kept outside for approximately 1-2 hours if she felt the goat would have had those veterinary care issues and ended up having to be euthanized and she reported to me that it is unlikely that the goat would have had those issues and been euthanized had it not been kept outside during that time.

Keeping animals outside in cold wet weather and not allowing them access to shelter can cause veterinary care issues like what happened in this case. Animals must be provided shelter to protect them from the elements of the weather. If animals are to be locked out of their stalls/shelter during the cleaning process, the cleaning process should be done as expeditiously as possible to minimize any distress to the animals. They should be monitored closely to make sure they aren't suffering any ill effects. During weather events, they can also be provided alternative shelter to prevent them from not being able to access shelter at all times.

Correct starting on 8/19/24.

Inspection Report

Facilities, general.

During inspection, a mouse was observed to be in the food storage container for the rabbits. Food storage that doesn't properly keep out vermin allows for possible contamination of the food supplies. Food shall be stored in a manner that adequately protects against infestation and contamination by vermin. Correct starting on 8/19/24.

This inspection and exit interview were conducted with the licensee.

End of report.
