Type: ROUTINE INSPECTION
Date: 14-JUN-2023

2.38(f)(1) Critical

Miscellaneous.

On 21 November, 2022, a Siberian hamster escaped from an enclosure because the lid was not adequately secured. The animal then managed to escape from the housing room and was caught in a pest control trap located in the hallway outside the room. When the animal was later found by the animal care staff, it's condition was assessed and the decision was made to euthanize. The facility has taken appropriate corrective measures to prevent this from happening again. Handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma , overheating, excessive cooling, behavioral stress, physical harm, or unnecessary discomfort.
Corrected at the time of inspection.

This inspection and exit interview were conducted with facility representatives.
